PROJECTS

- **Online Examination System (Senior Project):** a web platform for students and instructors to manage exams. The system allows for various question types, automated grading, and an efficient exam-taking experience.
- **Bluetooth-controlled Car Robot:** Developed a robotic car, handling both hardware assembly and software programming. The car is controlled via Bluetooth through a mobile app.
- **Mobile Store Website:** Developed a comprehensive e-commerce website for selling a variety of products, including laptops, phones, phone accessories, and tablets.
- **Natural Language Processing (NLP) Project:** Developed a text processing application using NLP techniques to analyze and manipulate text data. The project includes tasks like tokenization, sentiment analysis, and text classification.
- **Airline Company Database Project:** Designed and implemented a database system for an airline company to manage flight schedules, passenger information, and ticket bookings.
